Project Title: Employee Management System

Team Members: Ritesh Sharma / Sajjan Gautam

1. Project Scope

The Employee Management System is designed to streamline HR and employee-related tasks within a company. The system serves two primary user groups: HR/Admin and Employees.

Users:

- **HR/Admin:** Responsible for managing employee data, payroll, and leave.
- **Employees:** Can view their personal information, payroll details, leave status, and holiday calendar.

Beneficiaries:

- **HR/Admin:** Benefit from an efficient, centralized system for managing employee records, payroll, and leave.
- **Employees:** Gain easy access to their personal information and HR-related updates.

Potential Clients:

- **Small to Medium Enterprises (SMEs)**
- **Human Resource Consulting Firms**
- **Payroll Service Providers**
- **Educational Institutions**
- **Healthcare Organizations**

2. Project Functionalities

This section details the functionalities implemented in the project, how they work, and how users interact with them.

Admin Module:

1. Manage Employee Details:

- **Add Employee Information:** Admin can enter new employee information and save it to the MSSQL database.
- **Update Employee Information:** Admin can update existing employee details based on employee ID.
- **Delete Employee Information:** Admin can remove employee information from the database using employee ID.
- **Load Employee Information Database:** Admin can load and view all employee information stored in the database.

2. Leave Management:

- Admin can manage employee leave requests and status.

3. Payroll Management:

- Admin can manage payroll information for employees, including viewing and updating salary details.

Employee Module:

1. View Personal Details:

- Employees can log in to view their personal information stored in the system.

2. Apply for Leave and Check Leave Status:

- Employees can apply for leave and check the status of their leave requests.

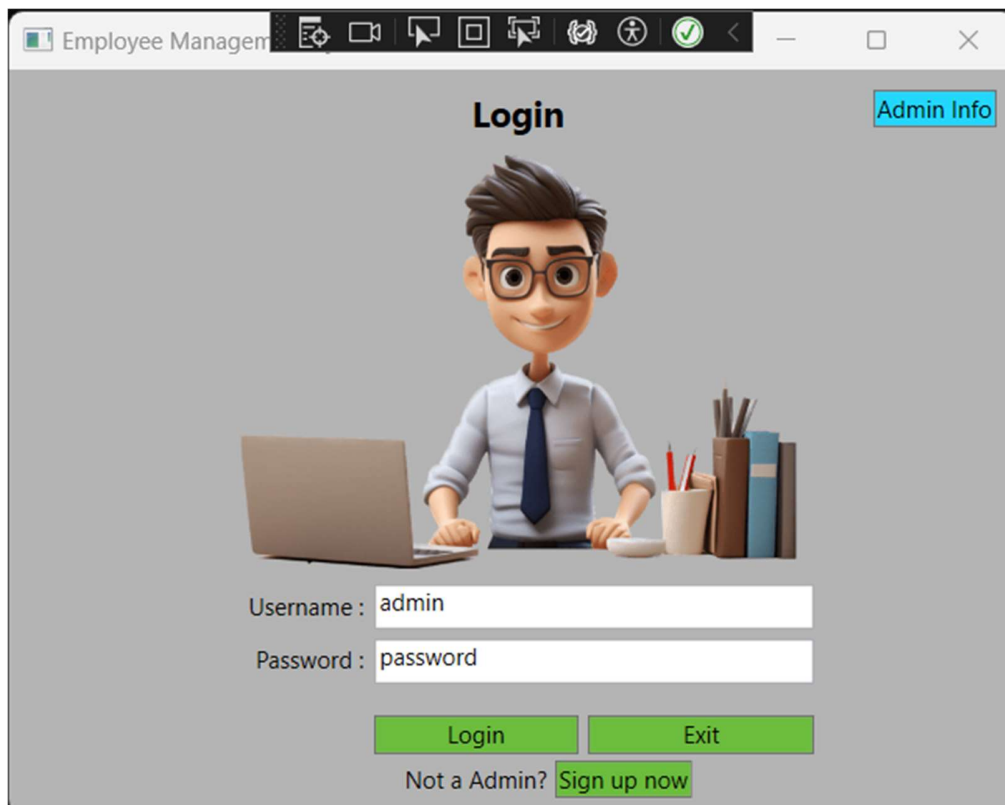

3. Check Payroll Information:

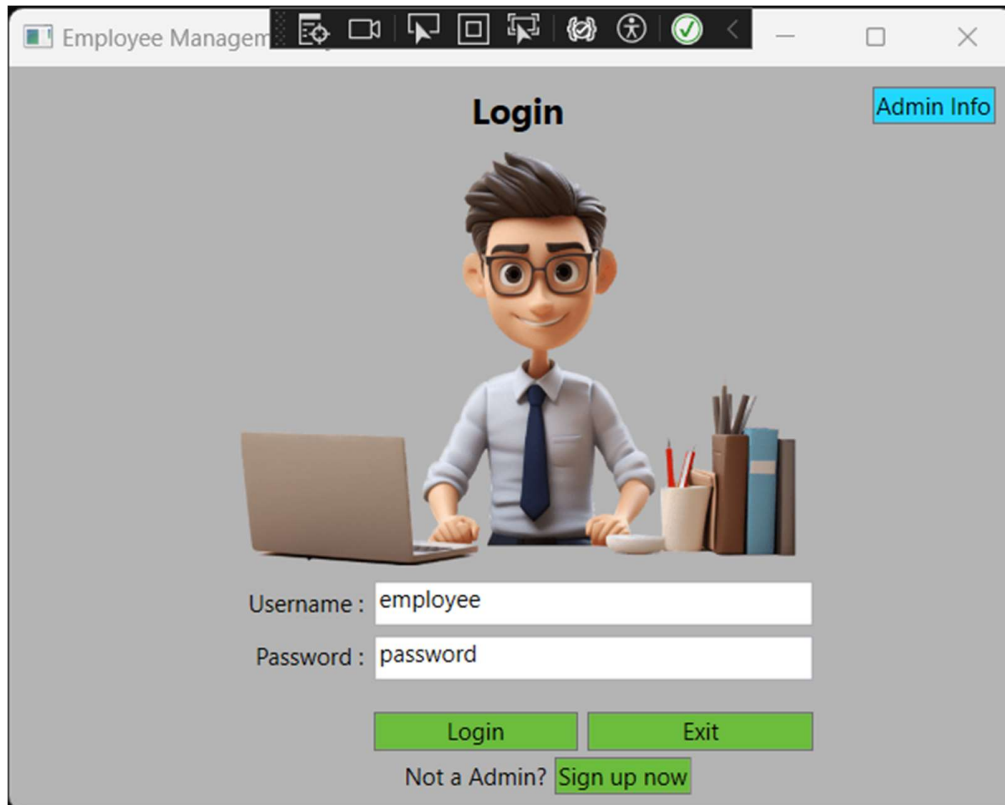

- Employees can view their salary details and payroll history.

Navigation and Screenshots:

- **Main Window:**

- On starting the application, users see the login screen where they enter their credentials.
- Depending on the credentials, users are redirected to either the admin or employee interface.

- **Admin Window:**

- Admins can choose to add, update, delete, or load employee information from the database.
- Separate sections for managing payroll and leave.

REST API Integration:

- Implemented a REST API using ASP.NET Core Web API for managing data operations.
- API endpoints handle CRUD operations for employee data, payroll, leave, and holiday management.

Updates from Mid-Term Evaluation:

- Integrated employee authentication and authorization mechanisms.
- Added data validation and error handling.
- Migrated the database to REST API-based architecture.
- Generated test programs for application testing and debugging.

3. Project Setup

To set up the project, follow these steps:

Prerequisites:

- **Database:** SQL Server 2022 (Version: 16.0.1000.6)
- **IDE:** Visual Studio 2022

Steps:

1. **Clone the Repository:**

git clone <https://github.com/Desktop-App-Dev-Intl-Summer-2024/Employee-Management-System.git>

2. Open the Solution:

- Open EmployeeManagementProject.sln and EmployeeManagementProjectAPI.sln in Visual Studio.

3. Set Up the Database:

- Restore the database using the provided backup file (EmployeeManagementProject_LogBackup_2024-07-15_23-07-48.bak) & (EmployeeManagementProjectUsers_Backup)

4. Configure API:

- Update appsettings.json with your database connection string.
- Build and run the API project to ensure the endpoints are accessible.

5. Run the Application:

- Build and run the main application from Visual Studio.
- Ensure the application connects to the API and database correctly.

4. Work Progress in Future

Future Enhancements:

1. Enhanced Reporting:

- Implement detailed reporting features for payroll, leave, and employee performance.

2. Role-Based Access Control:

- Add more granular access control based on user roles and permissions.

3. Mobile Application:

- Develop a mobile version of the application for Android and iOS platforms.

4. Advanced Data Analytics:

- Integrate data analytics tools to provide insights into employee performance, attendance, and other HR metrics.

5. Automated Notifications:

- Implement automated notifications for important events such as payroll updates, leave approvals, and holiday announcements.

6. Integration with Third-Party Services:

- Integrate with third-party payroll and leave management services for seamless data exchange.

This document outlines the scope, functionalities, setup instructions, and future work for the Employee Management System project. The system aims to streamline HR processes, improve data accessibility, and provide a user-friendly interface for both HR/Admin and employees.
